

DNS Updater 1.0.4.0 Release Notes

Build 1.0.4.0 (March 2011)

Feature Enhancements

- Default TCP/IP Port changed from 9000 to 51000
- Configuration file added to allow manual changing of TCP/IP Port

DNS Updater 1.0.3.2 Release Notes

Build 1.0.3.2 (November 2010)

Feature Enhancements

- TZO.com is now a supported Host.

Bug Fixes

- .NET 2.0 error on uninstall on Vista and Windows 7. When uninstalling DNS Updater while the product is running on Windows Vista or Windows 7 you would get an unhandled exception of .NET 2.0. This issues has been resolved.
- False notification of update available. When running version 1.0.1.0 a new version available was always reported. This issue has been resolved.

DNS Updater 1.0.1.0 Release Notes

Build 1.0.1.0 (September 2010)

Bug Fixes

- Crash on adding duplicate host: Fixed a crash that occurred when a user added the same host name twice.
- Misleading host message when a host is first added: When a host is first added the default message indicated that there was an unknown response, it is now more accurate that the host has not yet been checked.
